

Swiss aerosol production in 2023

Der Schweizerische Aerosolverband (Swiss Aerosol Association or ASA) has released its data for 2023, sharing that approximately 32 million aerosols were filled in Switzerland. This is a 6.312% increase over the 30.1 million filled in 2022. Most sprays were packaged in steel or aluminum cans, as “glass and plastic containers ... hardly play a role in Europe,” according to ASA.

Nussbaum Matzingen AG.

The 2024 ASA General Meeting took place on June 14, with all member companies taking part. The meeting was held in Matzingen, Switzerland, in the conference rooms of member company Nussbaum Matzingen AG. After discussing the agenda, there was also a tour of Nussbaum’s production facilities. **SPRAY**
